

## Intacct On-Demand Platform

Intacct on-demand financial management and accounting applications are in use at thousands of companies for streamlining and automating critical financial business processes. Featuring superior, deep financial applications and delivering unmatched business visibility, Intacct dramatically increases the productivity of finance departments and drives significant value to the business. Intacct's operations are SAS 70 Type II compliant and our applications are delivered over the Internet via Software as a Service (SaaS).

### The Business Mandate for Software as a Service

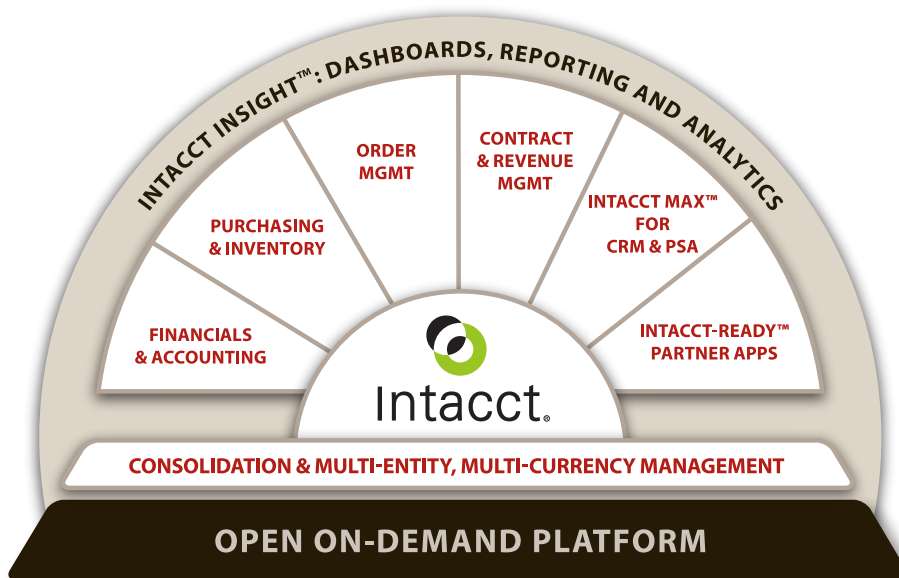

Organizations are gravitating toward the on-demand delivery model for all types of business applications. The Software as a Service model shifts many of the costs and risks of traditional on-premises

financial applications from the customer to the supplier. With low starting costs and a greater than 95% implementation success rate, the demand for Intacct grows as businesses are increasingly asked to do more with less.

With Intacct there are no capital costs, no operating costs, no hardware or software to install or maintain and no programming. Intacct is easy to upgrade and has low administrative costs. There are close to zero ongoing IT or operations costs. For an affordable and predictable subscription fee, you have on-demand access to world class financial management and accounting applications. We include free US-based support, access to a free online community and free online training.

With Intacct, more than 95% of clients successfully go live within three months of subscribing to Intacct, compared with traditional client-server software business applications, where there are high rates of failure (from 61% failure in a KMPG survey to more than 70% failure in analyses published by Gartner and InfoWorld.) The on-demand model reduces the complexity of installing, customizing, implementing, integrating and operating the applications so clients are up and running quickly and cost-effectively.

Intacct enables you to run your business better and more flexibly. Intacct applications are always on and always current, and you can securely access them anytime, from anywhere, with a Web browser and an Internet connection. This means employees can work from home or from remote

Intacct's on-demand platform delivers the highest level of customer success, satisfaction and value.

locations as easily as they can from the office, and they can work at any time of day. You can use this flexibility to make it easier to recruit financial talent, to tap into labor pools in geographically lower cost areas for repetitive tasks and collaborate in real time with outside accountants and auditors.

### Customization & Integration

Intacct applications are built on an open, highly scalable on-demand platform, so you can configure all of the applications without programming. For example, an easy-to-use wizard helps define custom fields so you can add additional information to applications. Smart Links, Smart Events and Smart Rules let you define actions that occur automatically, such as sending an email alert when someone creates a purchase order greater than a specified size, or reaching out to another system to pull data into your Intacct financial applications.

Intacct features a flexible, best of breed services oriented architecture (SOA) and is open and easy to integrate

“The Intacct financial management solution and its Web-based delivery model have significantly reduced our costs compared to maintaining an in-house accounting system.”

– Vice President of Finance, Voltage Security

with other business systems. Nearly all functions, business processes and data structures in the applications are available via the SOA platform, which uses industry standards such as web services and XML to communicate with external systems, both on-demand and on-premises.

### Performance, Reliability and Security

The performance, reliability and security of the Intacct on-demand applications are much better than those available through traditional on-premises alternatives. Our primary operating facility is run in a Tier 1 data center in San Jose, California. A global operations team monitors and manages Intacct applications seven days a week, and Intacct’s Buy with Confidence<sup>SM</sup>

commitment guarantees 99.8% or greater system availability. Over the last year, Intacct’s applications have experienced unscheduled downtime that averages less than 30 seconds per day — very few companies come close to this level of availability with their own internal applications.

The tier 1 data center and global 24x7x365 operations allow Intacct to offer levels of performance, reliability and security that exceed anything provided by all but a few Fortune 100 in-house computing environments. And, in the unlikely event of a major disaster in California that destroys the data center, Intacct partners with SunGard to ensure that your applications will be operational within 24 hours in SunGard’s disaster recovery facility in Philadelphia, Pennsylvania.

### Intacct. A Better Way to Run Your Business.

Superior financial applications. Real-time business visibility. An open, on-demand platform. Easy administration and configuration without programming. You can have all these things and the highest rate of customer success and satisfaction and the lowest total cost of ownership. Contact us to learn how Intacct can help you run your business, on-demand.

Extend the value of Intacct with best of breed applications.
